

Label Enterprise

Hazard Warning Label Design Software

Label Enterprise is the one-stop solution for advanced hazard warning label production, fully supporting the new GHS /CLP formats.

Label Enterprise allows you to merge the same substance information with any number of different template styles to satisfy all of your labelling needs - from lab samples to bottles, drums and IBC's. You can even save these combinations to quickly reproduce those labels at a later date.

Label Enterprise can produce: Carriage Labels (commonly referred to as Transport Labels); Supply Labels, in multiple languages, to identify your product and provide the end user with appropriate hazard, risk and safety information; and Combination Labels, combining all relevant Carriage/Supply details including warning diamonds, GHS symbols, Hazard & Precautionary phrases etc.

Unlike some other labelling systems, Label Enterprise has no output or usage restrictions and is designed to work with any standard Windows compatible printer (Windows printer driver required) to quickly and easily produce Carriage, Supply, Janitorial and a wide range of other labels and document types.

Quick and easy to use, the WYSIWIG (What You See is What You Get) style interface allows you to preview the appearance of your labels on screen before you commit to print.
